

# Fidelity Global Dividend W Inc

## What is the Fund's objective?

The Fund aims to increase the value of your investment with low volatility versus the MSCI All Country World (Net Total Return) Index. It also seeks to deliver an income that is at least 25% more than the income produced by companies included in the index. The Fund will invest at least 70% in equities (and their related securities) of companies globally. The Investment Manager will choose investments which it believes offer attractive dividend yields in addition to price appreciation. It is not restricted in terms of size, industry, or geographical split. The Fund is actively managed without reference to a benchmark. The Fund may also invest in other transferable securities, collective investment schemes, money market instruments, cash and deposits and is also able to use derivatives for efficient portfolio management. The Fund's performance can be compared to the MSCI All Country World (Net Total Return) Index as the index constituents are representative of the type of companies the Fund invests in. Many funds sold in the UK are grouped into sectors by the Investment Association (the trade body that represents UK Investment Managers), to facilitate comparison between funds with broadly similar characteristics. This Fund is classified in the IA Global Equity Income sector. Performance data on funds within this sector may be prepared and published by data providers and will be used when evaluating the performance of this Fund. The IA sector most closely reflects the combination of assets in the Fund. The Fund's performance can also be compared to the MSCI All Country World High Dividend Yield Index as the index constituents are representative of the type of companies the Fund invests in.
